Question:

Physical Geography

The iron ore which contains 72% of iron is:

1. Magnetite
2. Limonite
3. Haematite
4. Siderite

Downloaded From: eLearn Pro (https://myelearnpro.com/)

Explanation:
Pure magnetite contains 72.4 percent iron, hematite 69.9 percent, limonite 59.8 percent, and siderite 48.2 percent, but, since these minerals never occur alone, the metal content of real ores is lower.
