

Question:

Chemistry

Saccharin is made up of

- 1 Toluene
- 2 Phenol
- 3 Propane
- 4 Butane

Downloaded From: eLearn Pro (<https://myelearnpro.com/>)

Concept:

Saccharin is a non-nutritive or artificial sweetener. It's made in a laboratory by oxidizing the chemicals **o-toluene sulfonamide** or **phthalic anhydride**. It looks like white, crystalline powder. Saccharin is commonly used as a sugar substitute because it doesn't contain calories or carbs.
