

Question:**World Geography**

Which one of the following is the greatest circle?

- 1 Arctic Circle
- 2 Equator
- 3 Tropic of Cancer
- 4 Tropic of Capricorn

Downloaded From: eLearn Pro (<https://myelearnpro.com/>)

Explanation:

The Equator is the greatest circle of earth. If you were to cut into the Earth right on its Equator, you'd have two equal halves: the Northern and Southern Hemispheres. The Equator is the only east-west line that is a great circle. All other parallels (lines of latitude) get smaller as you get near the poles.
