Question:

Physical Geography

The largest ecosystem of the Earth is:

1. Biome
2. Hydrosphere
3. Lithosphere
4. Biosphere

Downloaded From: eLearn Pro (https://myelearnpro.com/)

Explaination:
A biome is a large geographical area that contains distinct plant and animal groups which are adapted to live in that environment. They are the interactions between biota, such as plants and animals, within the environment, and many ecosystems can make up a single biome.
