

**Question:****Physical Geography**

Mist is caused by:

- 1 dry ice
- 2 ice at low temperature
- 3 water vapour at low temperature
- 4 carbon-monoxide in solid form

*Downloaded From: eLearn Pro ( <https://myelearnpro.com/> )*

**Explanation:**

Mist is tiny droplets of water hanging in the air. These droplets form when warmer water in the air is rapidly cooled, causing it to change from invisible gas to tiny visible water droplets.
