Question:

Biology

Male mosquitoes take their food from

1. the human blood
2. the standing water
3. the sap of plants
4. the dung and other debris

Downloaded From: eLearn Pro (https://myelearnpro.com/)

Concept:
Male mosquitoes feed only on **plant juices**, such as **nectar**, to get the sugar they need for energy and survival. As males do not bite, they cannot transmit diseases. **Female mosquitoes** , on the other hand, **need protein from blood** for the development of their eggs.
