Question:

Biology

Haemolymph is observed in

1. Arthropods
2. Echinoderms
3. Ascaris
4. Annelids

Downloaded From: eLearn Pro (https://myelearnpro.com/)

Concept:
Hemolymph, or **haemolymph**, is a fluid, analogous to the blood in vertebrates, that circulates in the interior of the **arthropod** (invertebrate) body, remaining in direct contact with the animal's tissues. It is composed of a fluid plasma in which hemolymph cells called hemocytes are suspended.
