

Question:

Biology

Which one of these animals is jawless?

- 1 Shark
- 2 Myxine
- 3 Trygon
- 4 Sphyrna

Downloaded From: eLearn Pro (<https://myelearnpro.com/>)

Concept:

Myxine is a genus of hagfish. In 2021, three new species of Myxine were described from the Galápagos including *M. phantasma*, the only species of Myxine to not have melanin-based pigments.
